The user of your application should be able to:

1. **Create a text-only note**
   As soon as the applications opens up we have a list of notes and an add option to add new notes. On clicking the add we can create a new text note.

2. **Save a newly created note**
   On writing the desired notes one can click on the save button to save the notes which will persist throughout the working of the application.
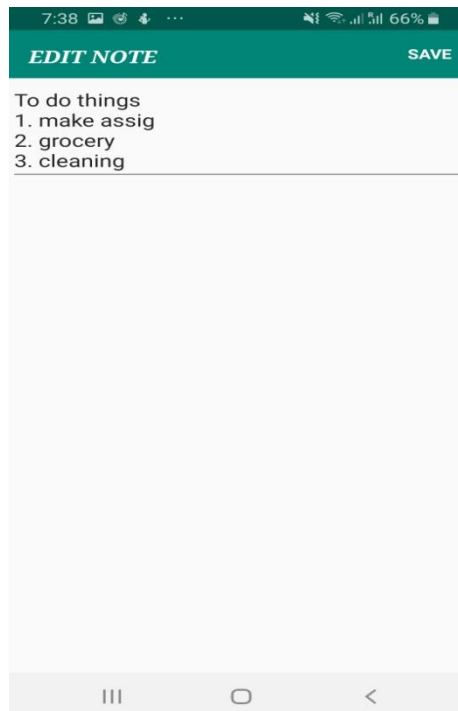

3. Open and view saved notes
One can anytime open the saved notes to view them.

4. Edit notes
If the user wishes to edit the saved notes he can open up the notes and change the text of the notes.

5. Delete saved notes
On long pressing the saved notes in the list, a pop up appears to delete the saved notes.
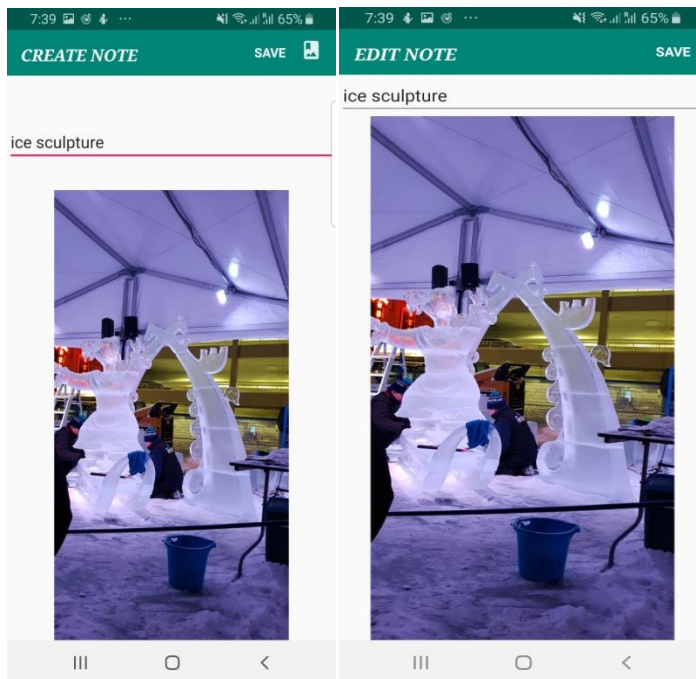

6. An options menu to each note

There is an options menu to each note where we can save, upload and delete the note.
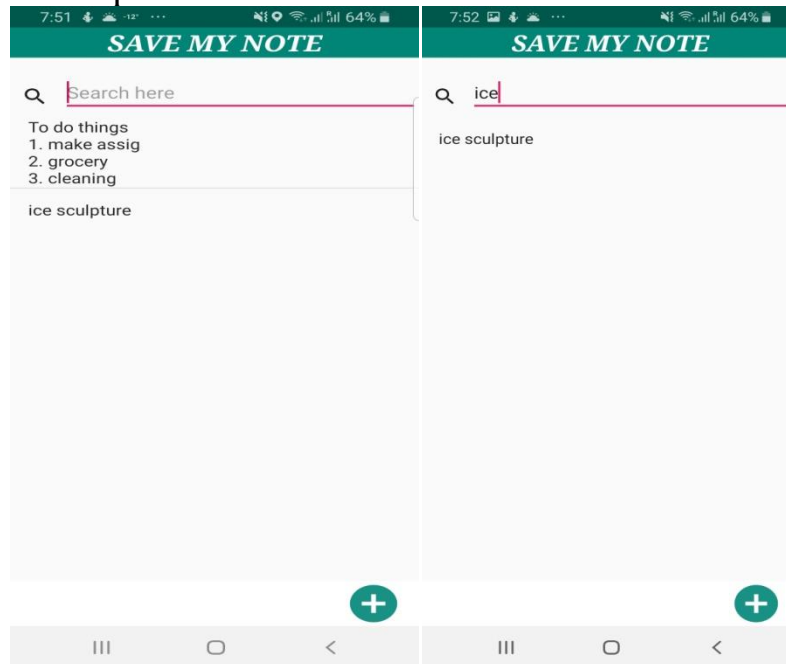

7. Ability to embed images into notes

Using the gallery option in create note we can upload the image to each of our note.
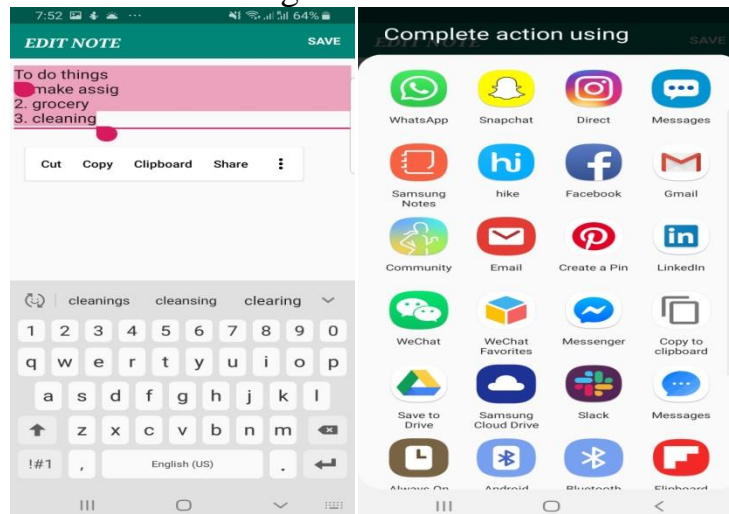

ADDITIONAL FEATURES:

1. **SEARCH WITHIN THE LIST OF NOTES:**
   There is a search option in the main screen, where we can search for the notes. Here the note with a particular text which we are searching for will show up.

2. **SHARE VIA EMAIL OR FACEBOOK:**
   When we long press the text in an individual note, the option comes up to share our text using different social media.

3. SUPPORT WORKING IN BOTH LANDSCAPE AND PORTRAIT MODE

The application works in both portrait and landscape mode.
